International Application No. PCT/BE2005/000007

Attorney Docket: PENN3001/JEK

ABSTRACT OF THE DISCLOSURE

Method for binding a quire formed of folded sheets slipped into each other, characterised in that it consists in providing at least one cut through the sheets of the quire as of a short distance from the folding edge of the quire, whereby every cut through a sheet of the quire defines a lip extending mainly crosswise to the abovementioned folding edge of the quire and which is connected to the quire with its far end turned towards the folding edge, and whereby said lip has a widening.
